AXLES COMPATIBLE WITH 250 X 40 BACKPLATES – 5 BOLT

In March 2014 the design of the 250 x 40 backplate changed. For trailers manufactured before March 2014 with 250 x 40 Knott backplates, a replacement axle weld assembly is no longer available which suits that design of backplate. Should you require a replacement axle weld assembly, you will need to order a new 'complete axle assembly' which will be supplied with the new style backplates fitted (and hub).

RUNNING GEAR & WHEEL EQUIPMENT

Check the pressure of your trailer tyres before every journey. Under-inflated tyres can cause excessive wear and increased fuel consumption. If severely under-inflated a tyre may overheat and fail. The table below indicates the correct tyre pressures, please be aware that although the total combined tyre max load may exceed the trailer gross weight, the limit outlined on your VIN plate should always be adhered to.
